Suppandi is trying to take part in the local village math quiz. In the first round, he is asked about shapes and areas. Suppandi, is confused, he was never any good at math. And also, he is bad at remembering the names of shapes. Instead, you will be helping him calculate the area of shapes.

- · When he says rectangle he is actually referring to a square.
- · When he says square, he is actually referring to a triangle.
- · When he says triangle he is referring to a rectangle
- · And when he is confused, he just says something random. At this point, all you can do is say 0.

Help Suppandi by printing the correct answer in an integer.

```
Answer: (penalty regime: 0 %)
```

```
#include<stdio.h>
    int main()
 2
 3 + {
        int a,b,s,t,r;
 4
        char d;
 5
        scanf("%c %d %d",&d,&a,&b);
 6
 7
        t=a*b;
        s=0.5*a*b;
 8
        r=a*b;
 9
10
        switch(d)
11 v
            case('S'):
12
            printf("%d",s);
13
            break;
14
            case('R'):
15
            printf("%d",r);
16
17
            break;
            case('T'):
18
            printf("%d",t);
19
20
            break;
            default:
21
            printf("0");
22
23
        return 0;
24
25 }
```

Superman is planning a journey to his home planet. It is very important for him to know which day he arrives there. They don't follow the 7-day week like us. Instead, they follow a 10-day week with the following days: Day Number Name of Day 1 Sunday 2 Monday 3 Tuesday 4 Wednesday 5 Thursday 6 Friday 7 Saturday 8 Kryptonday 9 Coluday 10 Daxamday Here are the rules of the calendar: • The calendar starts with Sunday always. • It has only 296 days. After the 296th day, it goes back to Sunday. You begin your journey on a Sunday and will reach after n. You have to tell on which day you will arrive when you reach there.

Input format: •

Contain a number n (0 < n)

Output format: Print the name of the day you are arriving on

**Example Input** 

7

**Example Output** 

Kryptonday

**Example Input** 

1

**Example Output Monday** 

## Answer: (penalty regime: 0 %)

```
